Employer Guidance for Oklahoma’s Open Up and Recover Safely Plan

Please note this guidance is not comprehensive, it is intended to serve as a tool to help businesses and local officials establish general protocols encountered in various situations. We have identified some foreseeable health risks associated with Covid-19 and have provided suggestions to mitigate those risks. Effective safety measures that protect employees and citizens are critical to a successful reopening of our great state. There are unique situations not covered here, and we rely on collaboration with our local officials, businesses and citizens using their best judgement during this unprecedented time. We must all take responsibility to protect those in our community. Thank you for doing your part to ensure the safety of all Oklahomans.

Personal Care Businesses: Hair & Nail Salons and Barbershops

- May reopen for appointments only beginning April 24, 2020
- Should adhere to sanitation and disinfecting protocols and social distancing guidelines from the CDC.

Recommended Guidelines for Temperature Checks & Employer Policies
Hair and nail salons and barbershops should consider use of a touchless infrared thermometer to check the temperature of employees each day. Employees with a temperature above 100.4°F are recommended to be sent home until they have no fever and no evidence of COVID-19 symptoms. Employers should consider implementing flexible sick leave and supportive policies and practices for employees and consider needs of employees older than 65 years or in other vulnerable populations.

Sanitation & Disinfecting Guidelines

- You are encouraged to develop, implement, and maintain and revise a cleaning and disinfecting plan for your workplace.

Developing Your Plan

- Evaluate your business to determine what kinds of surfaces and materials make up that area. Most surfaces and objects will just need normal routine cleaning. Frequently touched surfaces and objects like light switches and doorknobs should be cleaned and then disinfected to further reduce the risk of germs on surfaces and objects.
  - First, clean the surface or object with soap and water.
  - Then, disinfect using an EPA-approved disinfectant.
  - If an EPA-approved disinfectant is unavailable, you can use 1/3 cup of bleach added to 1 gallon of water, or 70% alcohol solutions to disinfect. Do not mix bleach or other cleaning and disinfection products together.

Determine What Needs to be Cleaned
• If your business has been unoccupied for 7 days or more, it will only need your normal routine cleaning to reopen the area. This is because the virus that causes COVID-19 has not been shown to survive on surfaces longer than this time.

**Determine What Needs to be Disinfected**

• Following your normal routine cleaning, you can disinfect frequently touched surfaces and objects using a product from EPA’s list of approved products that are effective against COVID-19.
• If you are cleaning or disinfecting a hard and non-porous material or item like glass, metal, or plastic, consult EPA’s list of approved products for use against COVID-19. Examples of high-touch areas that need to be disinfected are:
  o Tables, doorknobs, light switches, countertops, handles, desks, phones, keyboards, toilets, faucets and sinks, touch screens, and ATM machines.
  o Tools used for services, tables or chairs clients use.
• If you are cleaning or disinfecting a soft and porous material or items like carpet, rugs, or seating in areas, these soft and porous materials are generally not as easy to disinfect as hard and non-porous surfaces. EPA has listed a limited number of products approved for disinfection for use on soft and porous materials.
  o Soft and porous materials that are not frequently touched should only be cleaned or laundered, following the directions on the item’s label, using the warmest appropriate water setting.

**Implement Your Plan**

• Clean visibly dirty surfaces with soap and water. Clean surfaces and objects using soap and water prior to disinfection. Always wear gloves appropriate for the chemicals being used for routine cleaning and disinfecting.

**Maintain and Revise Your Plan**

• Routine cleaning and disinfecting are an important part of reducing the risk of exposure to COVID-19. Normal routine cleaning with soap and water alone can reduce risk of exposure and is a necessary step before you disinfect dirty surfaces.
• Surfaces frequently touched by multiple people, such as door handles, desks, phones, light switches, and faucets, should be cleaned and disinfected at least daily.
• More frequent cleaning and disinfection may be required based on level of use.

**Additional Cleaning and Sanitation Practices**

• Use disinfectants and sanitation products approved by the Oklahoma State Board of Cosmetology and Barbering or EPA-registered and labeled as bactericidal, viricidal and fungicidal for tools and implements used in hair salons, barbershops and nail salons.
• Clean tools and implements regularly with soap and water before disinfecting them. After cleaning, disinfect tools and implements per guidelines approved by the Oklahoma State Board of Cosmetology and Barbering.
• Replace disinfectants regularly.
• Regularly clean and sanitize surfaces that customers come into contact with such as chairs, door knobs, point of sale equipment, handles, shampoo bowls, etc.
• Launder all towels, capes and linens after each use or disinfect non-porous surfaces.
• Hand/foot nail drying tables should be cleaned after each customer.
• Manicure and pedicure tools, including bowls, should be cleaned and disinfected before each customer and in accordance with any normal procedures from licensing boards.

Treatment rooms
• Clean and disinfect all surfaces such as, chairs, tables, electrical appliances (don’t forget the cords).
• Clean and disinfect all linens and store in a closed container/cabinet.
• Clean and disinfect all hampers that hold soiled linens and be sure to use one that can be lined and closed.
• Remove and discard any products that could have been contaminated by improper unsanitary use. Replace with new product.
• Clean and disinfect all tools and implements after each customer’s use.
• Empty all wax pots and disinfect before refilling them with new wax.

Social Distancing Guidelines
Hair Salons, barbershops and nail salons are personal contact businesses. Remaining six feet apart as in other businesses is not possible in these establishments. However, there are guidelines that can be utilized allowing these businesses to operate while also minimizing risk from COVID-19.

• Wash hands regularly with soap and water and consider using personal protective equipment such as gloves or face masks if the customer requests.
• If wearing gloves, wash hands after removing gloves and discard used gloves.
• Consider using hand lotions to keep skin intact from frequent hand washing.
• Consider providing hand sanitizer to customers.
• Stagger appointments to minimize the number of customers in the store.
